DETAILED ACTION

Election/Restrictions

1. The Examiner acknowledges the cancellation of claims 19, 20, 25-30, 40, 42-44 and 76-86 as being drawn to a nonelected species, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on 10 January 2005. The Examiner fully agrees with the Applicant that Figures 3 and 4 can be grouped together in the previously identified species.

2. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-18, 21-24, 31-39, 41-74, drawn to a positioning system, classified in class 33, subclass 503.

II. Claim 75, drawn to method of directing an articulated positioning arm, classified in class 700, subclass 247.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the positioning system and method for positioning the articulated arms of the

Art Unit: 2856

positioning system can be controlled/driven by any type of controller or programming steps. The subcombination has separate utility such as programming/controlling any type of robotic/articulated arm, not just the one in the instant application.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
